PROJECTS

Virtual Mouse Using Hand Gesture

- Developed an innovative virtual mouse application combining hand gesture recognition and voice control.
- Leveraged computer vision with OpenCV for real-time hand gesture detection and Python for voice command integration.
- Enabled users to initiate the virtual mouse through voice commands and control cursor movements and clicks with hand gestures.
- Improved accessibility and user experience by providing a hands-free interface.

QUESTIONPRO

- This project aims to simplify online survey creation and analysis.
- The platform offers 250+ templates for various needs, real-time analytics, and multi-channel distribution while ensuring privacy and security.
- The project emphasizes user-friendly customization, educational support, and continuous improvement.
